

# Aventura TwoNav - GPS: Map Unlocking Procedure

In case you want to install a new map requiring a map key on your Aventura (e.g. v-map Eastern Europe) you will find the following screen on your Aventura after transferring the map and trying to open for the first time:

In this case, please proceed as follows:

- \* Open your webbrowser and connect to this URL: [www.compegps.com/regmap](http://www.compegps.com/regmap)
- \* Enter the "Register Code" which you find inside your original disk package and also enter the "Confirmation Code" which will be listed in red in the webbrowser window.
- \* Enter the Device-ID of your Aventuras (see above) and also your name and e-mail address.
- \* Download the generated key file and copy it to the internal Aventura memory, which means to `X:\TwoNav\`. Please note that the drive ID will vary according to your PC configuration. So it might be necessary to replace "X" by "D", "E", "F", "G" or "H", etc.
- \* Thereafter the map can be opened. It can also be transferred to other SD memory cards without a problem.

## Remarks:

We strongly recommend to make a backup copy of your map key files on your PC!

You can activate each compeGPS map on up to 2 devices!

For this purpose just repeat the registering process.

For compeGPS software products the "Device-ID" must be replaced by the "Software-ID".
